

EMOTION-BASED MUSIC RECOMMENDATION SYSTEM

TEAM MEMBER -

UCE2023612 - TANISHA CHAVAN

UCE2023549 - RUTUJA PALANDE

UCE2023654 - SAKSHI POWAR

Problem Statement

- Users spend time searching for songs that match their mood.
- Existing apps do not automatically detect emotions.
- Need for a system that understands human feelings through facial expressions.
- Aim to recommend appropriate songs instantly based on detected emotion.

Aim / Objectives

- To detect real-time facial emotions using AI & ML.
- To recommend songs based on the user's current mood.
- To build an interactive, user-friendly interface.
- To connect frontend & backend with an emotion recognition model.

Introduction

- Music preferences change according to a person's current emotional state.
- Detecting facial emotions helps the system understand what type of music the user needs.
- AI-driven song suggestions make the process faster, smarter, and fully automatic.
- Our system combines emotion recognition and music recommendation to deliver a personalized listening experience.

Dataset & Technologies Used

Dataset:

- FER-2013
- total of 35,887 images
- Happy, Sad, Angry, Fear, Surprise, Disgust, and Neutral.

Frontend:

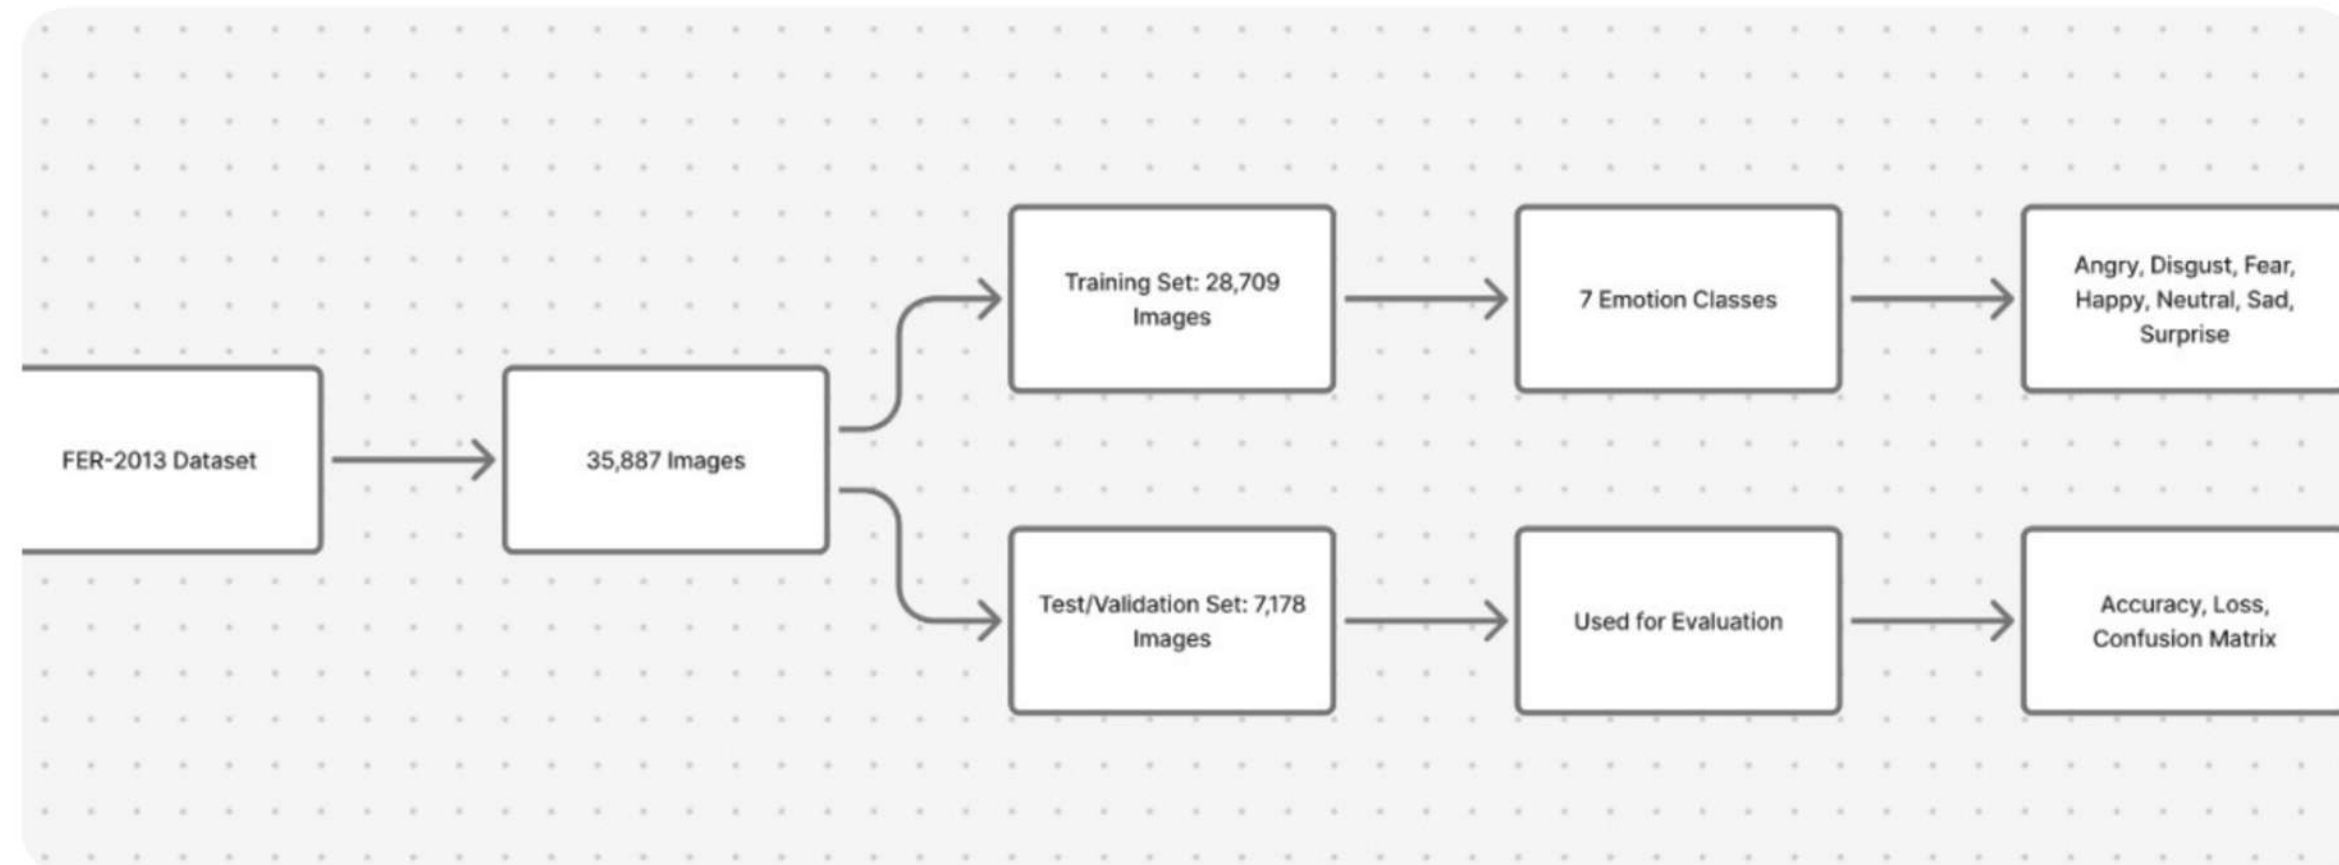

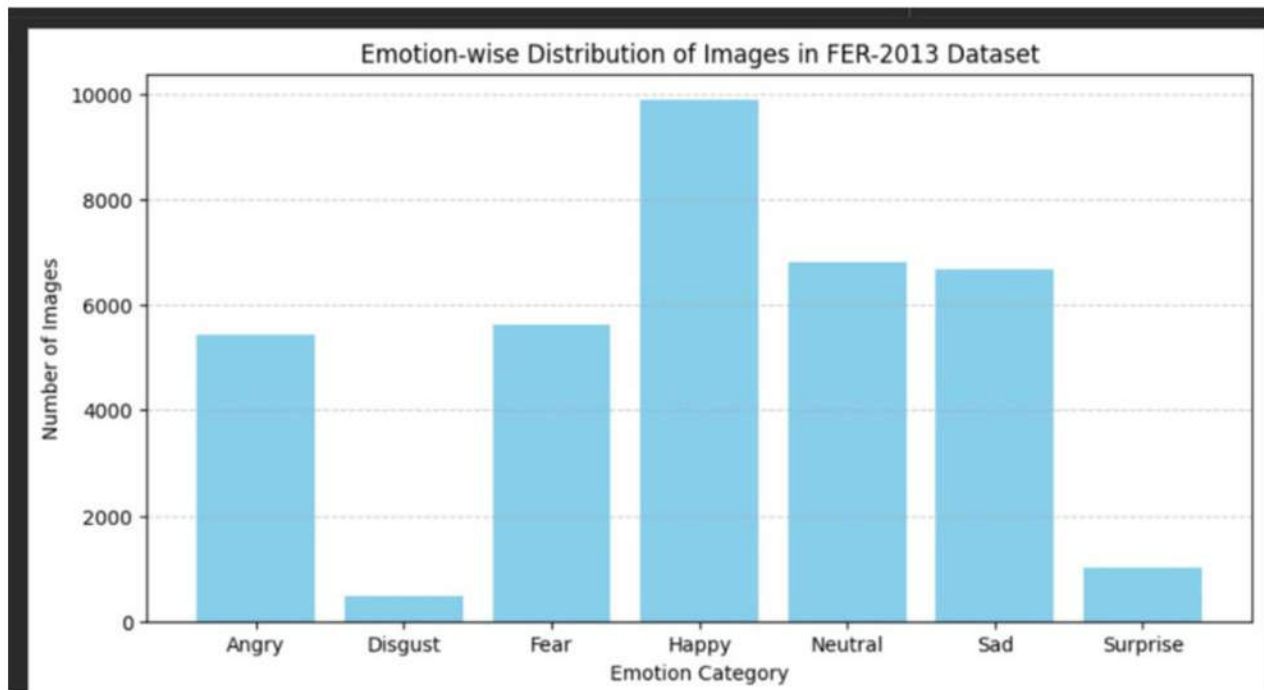

- HTML
- CSS
- JavaScript

Backend:

- Python Flask / FastAPI
- Google Colab

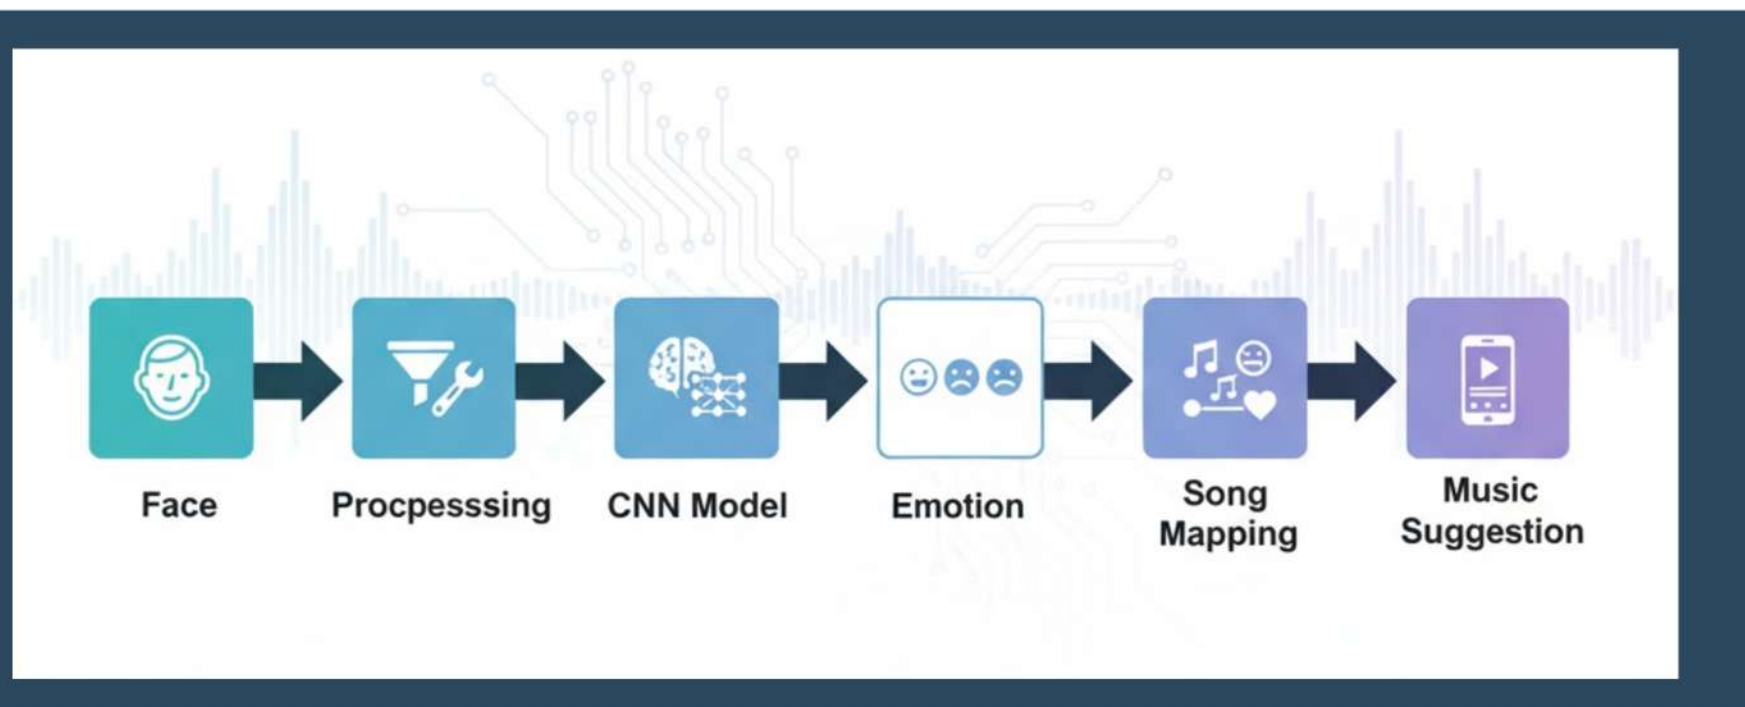

Machine Learning:

- CNN (TensorFlow/Keras)
- OpenCV for face detection

Workflow

- **System captures user image (normal users click once; blind users auto-capture every 5 seconds).**
- **Image is pre-processed (grayscale, resized).**
- **CNN model (trained on FER2013) analyzes the face.**
- **Emotion is detected from 7 categories.**
- **System generates and announces emotion-based playlist.**

Key Features

**Real-time
Facial Emotion
Detection
using a trained
CNN model**

**Live Webcam
Integration for
capturing user
emotions.**

**Emotion-to-
Song Mapping
for multiple
mood
categories.**

**Auto-capture +
voice output
makes the
system blind-
friendly.**

**Automatic Song
List Generation
for each
emotion type**

Dynamic Playlist Generalization

- Automatically creates playlists based on the user's detected mood
- Updates song list instantly when the user's emotion changes
- Mixes user history + current mood for more accurate playlists
- Continuously refreshes recommendations as new songs are played
- Ensures every playlist feels personalized, relevant, and unique

Emotion: Happy

Captured: 2025-11-17T09:24:06.975287Z

Song	Artist	Type
Bloom Again	Coral Transit	Feel-Good Pop
Sunrise Smile	Luna Chase	Feel-Good Pop
Bright Skies	Neon Harbor	Feel-Good Pop
Radiant Road	Velvet Avenue	Feel-Good Pop
Sonic Confetti	Laser Arcade	Festival Pop
Skyburst Parade	Metro Lights	Anthem Pop
Color Rush	Ruby Arcade	Uplifting Synth
Quantum Leap	Glacier Pulse	Shimmer Synth
Neon Bloom	Chrome Arcade	Retro Future
Electric Bloom	Cosmo Relay	Future Disco

Personalised Recommendation System

Personalized Recommendation

Most frequent emotion: **Happy**

Song	Album	Artist	Type
Bloom Again	Garden Hearts	Coral Transit	Feel-Good Pop
Sunrise Smile	Sunlit Canvas	Luna Chase	Feel-Good Pop
Bright Skies	Blue Horizon	Neon Harbor	Feel-Good Pop
Radiant Road	City Lights	Velvet Avenue	Feel-Good Pop
Sonic Confetti	Starlit Crowd	Laser Arcade	Festival Pop
Skyburst Parade	Color Theory	Metro Lights	Anthem Pop
Color Rush	Lightspeed Love	Ruby Arcade	Uplifting Synth
Quantum Leap	Mirage Circuit	Glacier Pulse	Shimmer Synth
Neon Bloom	Crystal Drip	Chrome Arcade	Retro Future
Electric Bloom	Glitter Path	Cosmo Relay	Future Disco

Liked Songs

Song	Album	Artist	Type	Liked On
Turbo Canvas	Hyper Lanes	Pixel Parade	Chiptune Fusion	2025-11-17T09:20:14.976936Z
Flash Forward	Light Speed	Signal Theory	Electro Pop	2025-11-17T09:20:13.860767Z
Bloom Again	Garden Hearts	Coral Transit	Feel-Good Pop	2025-11-17T09:20:03.518438Z

DETECTED EMOTION

Neutral

- Learns each user's listening habits and mood preferences
- Suggests songs that match the user's emotional patterns
- Creates customized playlists unique to every user
- Improves recommendations based on likes, skips, and repeats
- Combines mood detection with song history for highly accurate suggestions

Results

- Model trained and tested on a large labeled emotion dataset.
- Successfully detects 7 human emotions.
- Achieved 99.63% accuracy in emotion classification.
- Generates emotion-based music playlists automatically.
- Delivers a personalized and smooth music recommendation experience.

Conclusion & Future Scope

Future Scope:

- Integration with Spotify/YouTube APIs for real-time music recommendations.
- Add automatic volume adjustment based on detected emotion.
- Add offline mode to play saved emotion-based playlists.
- Add dynamic playlist switching where songs automatically change if the user's mood changes during listening

Conclusion:

Our project accurately detects emotions using CNN (FER2013) and delivers personalized music recommendations, while also supporting blind users through automatic image capture and voice feedback—creating a smart, inclusive, and emotion-aware music system..

*Thank
you!*
